Establish Typical Sizes for Typical Work	3
---	----------

Establish Typical Sizes for Typical Work

Establish known size to known definition of done for all defects, research, new features, etc. For example determine what a typical size 2 work no matter what kind of work it is:

- Defect to known, typical Definition of Done
- New feature to known, typical Definition of Done
- Release Sprint item to known, typical Definition of Done
- Research Item to known, typical Definition of Done

This approach is a variation on both [Establish a Keystone User Story](#) and [Establish Points Guidelines for Each Point Value](#)

This, again, can help with consistency.

[Team](#), [Estimates](#), [Forecast](#), [Points](#), [EstimationPractice](#), [Typical](#)
